A project is a temporary endeavor undertaken to create a unique product, service, or result.

Source: Project Management Body of Knowledge

An IT project is a temporary endeavor undertaken to create a unique product, service, or result by introducing, extending, upgrading or decommissioning IT Systems

PROJECT

SUCCESSFUL IT PROJECT MANAGEMENT

Project Organization

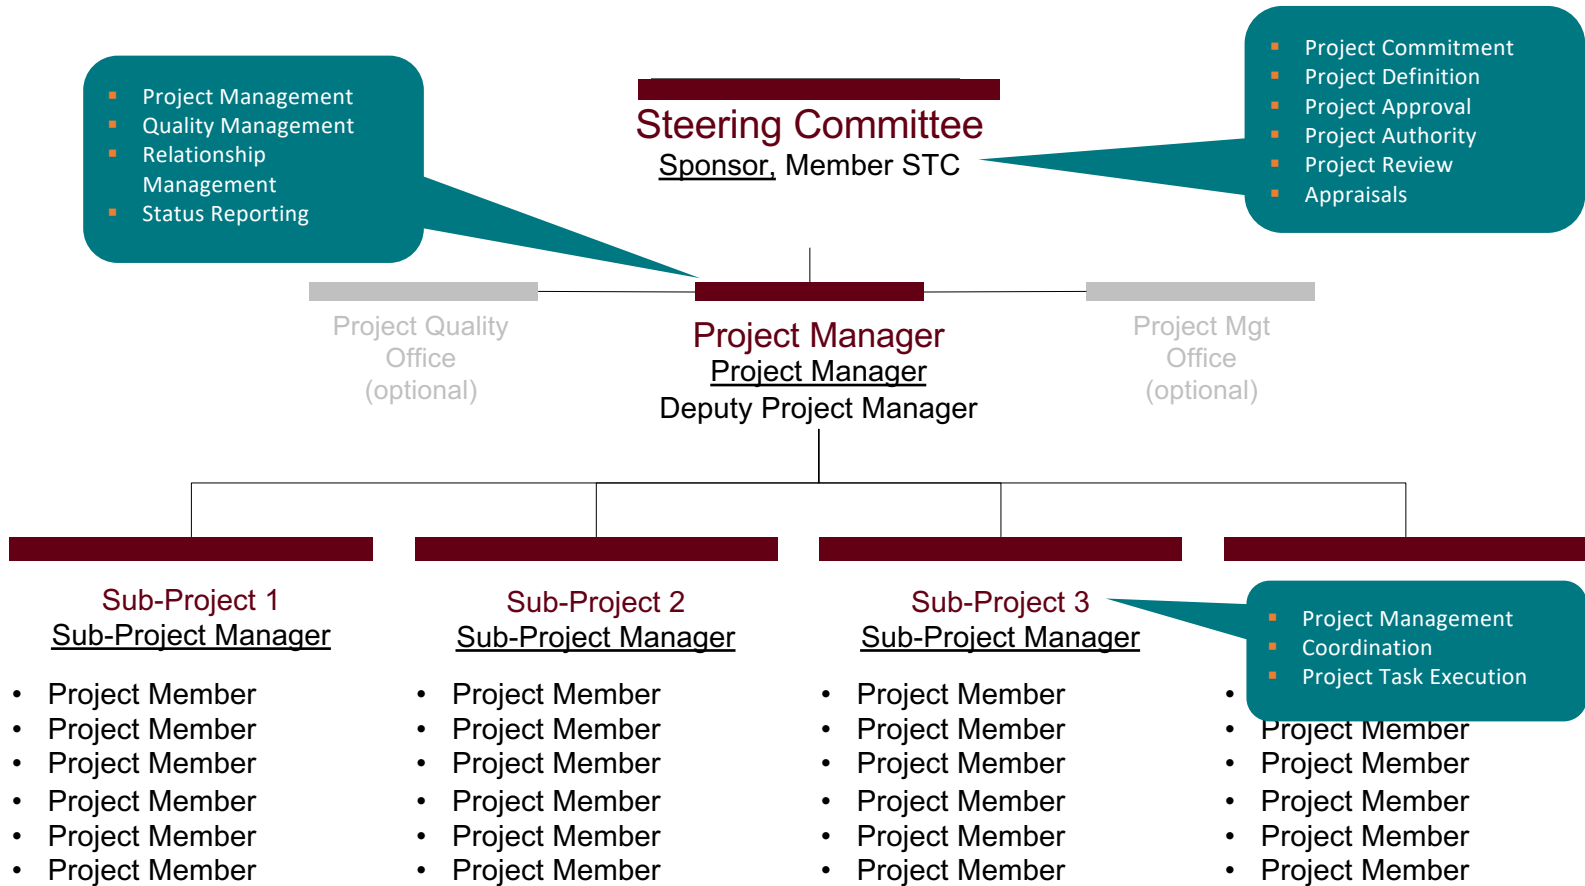

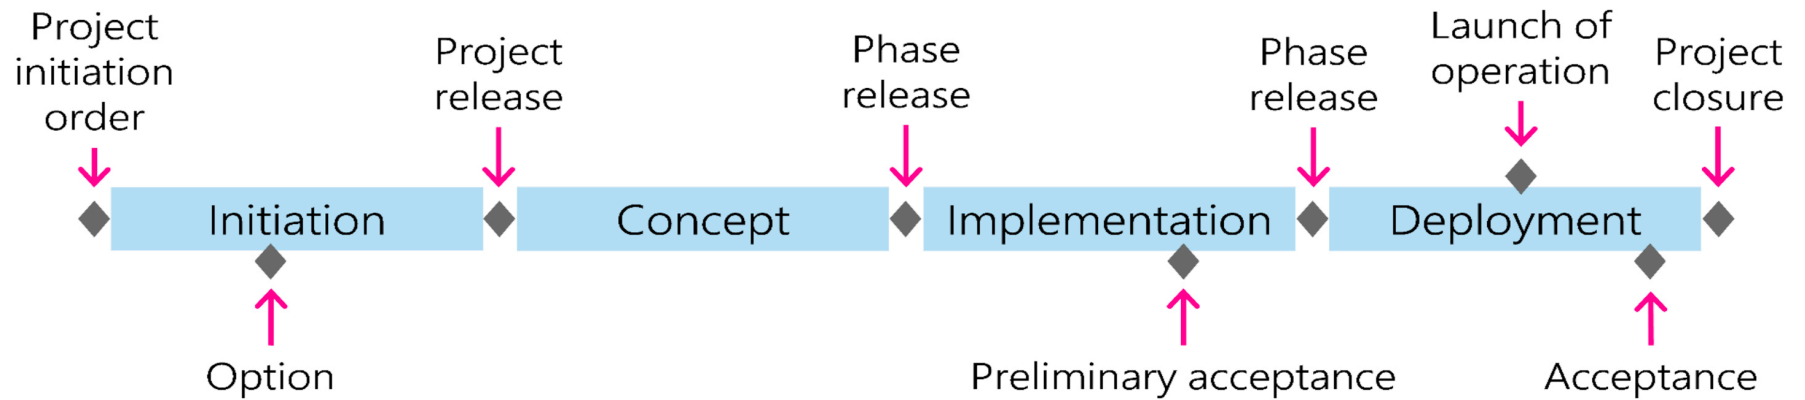

Project Phases

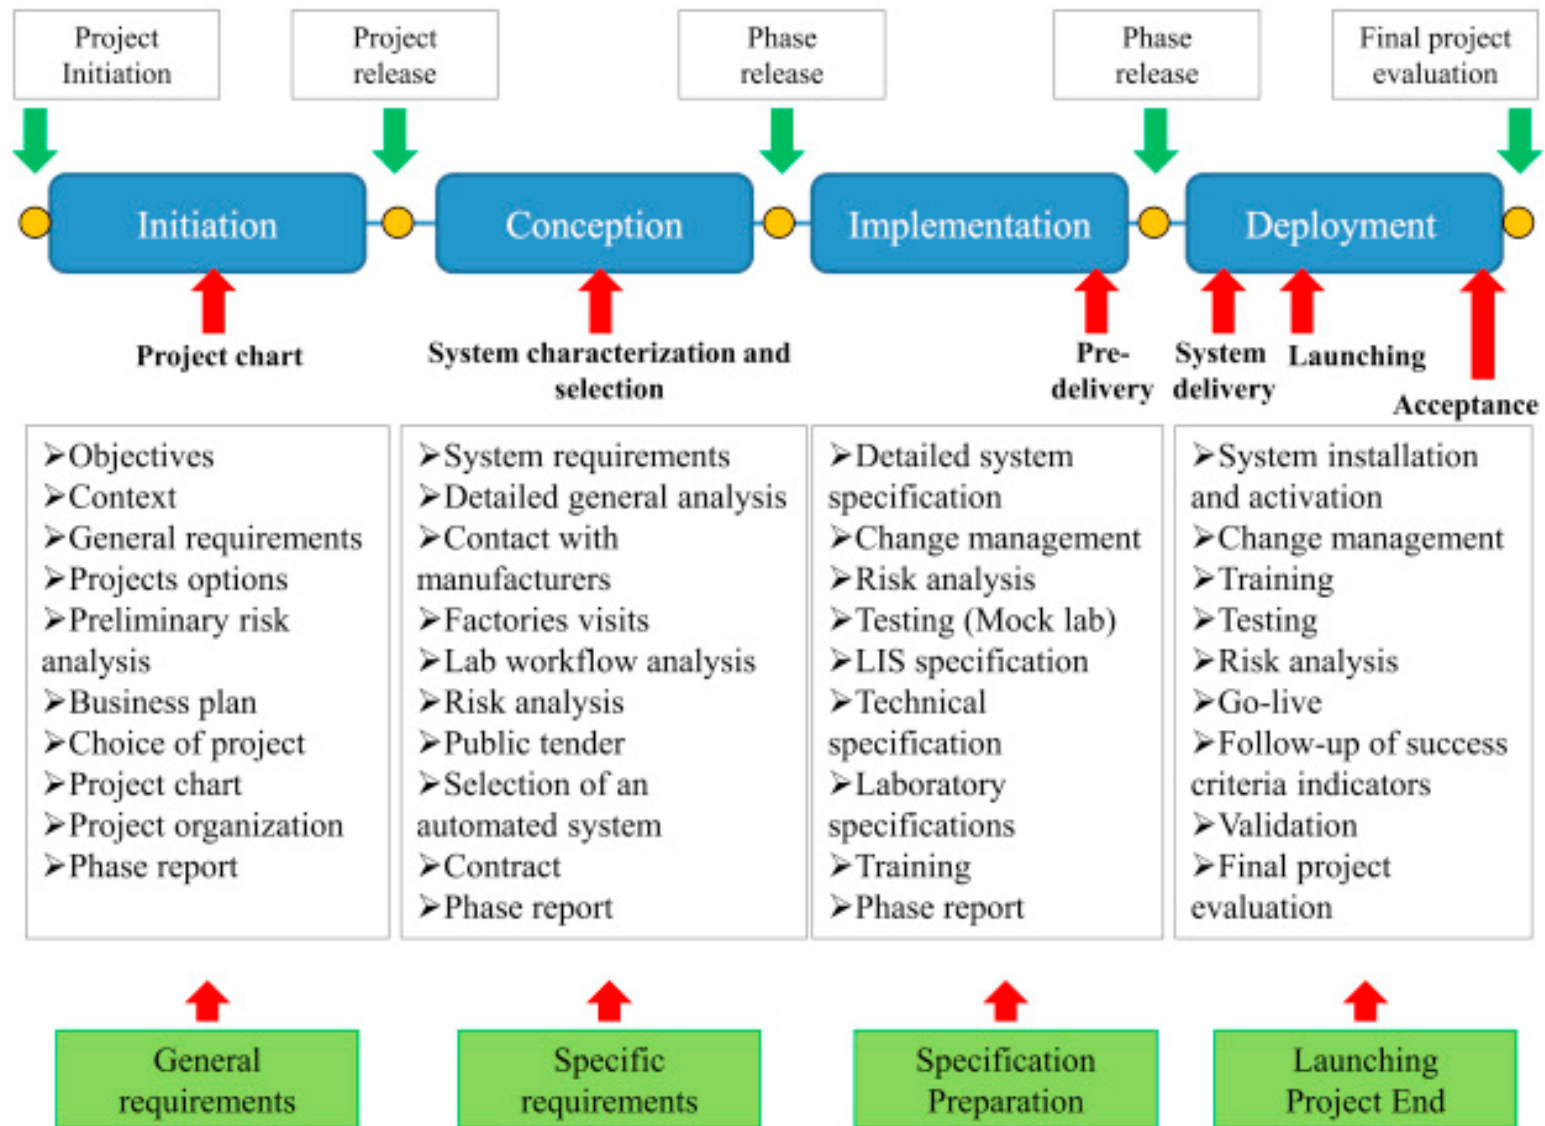

Support Processes

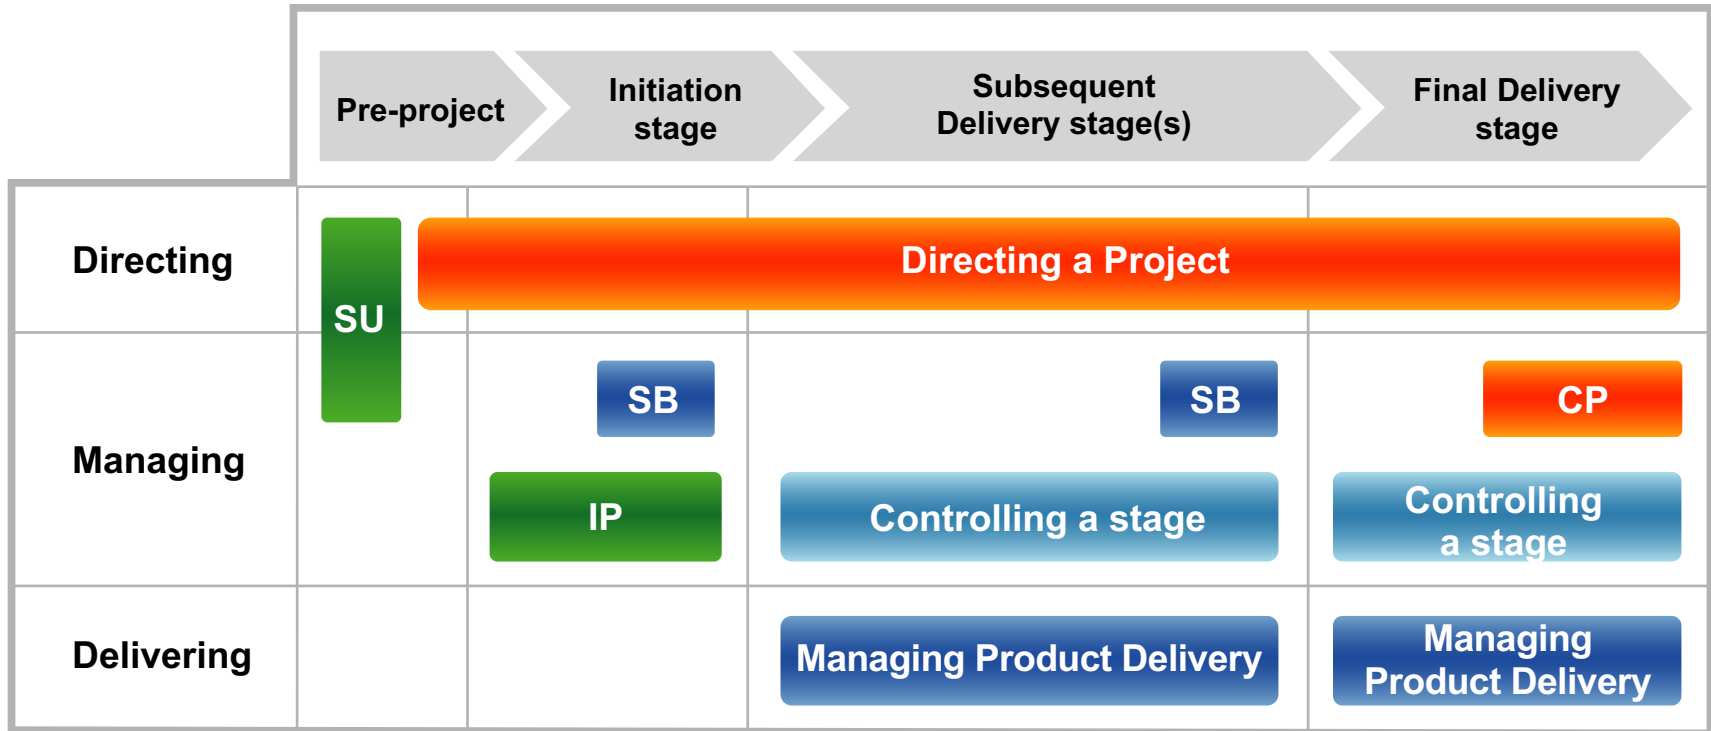

Example based on Hermes

Project Phases according to Prince2

Key

SU = Starting up a Project

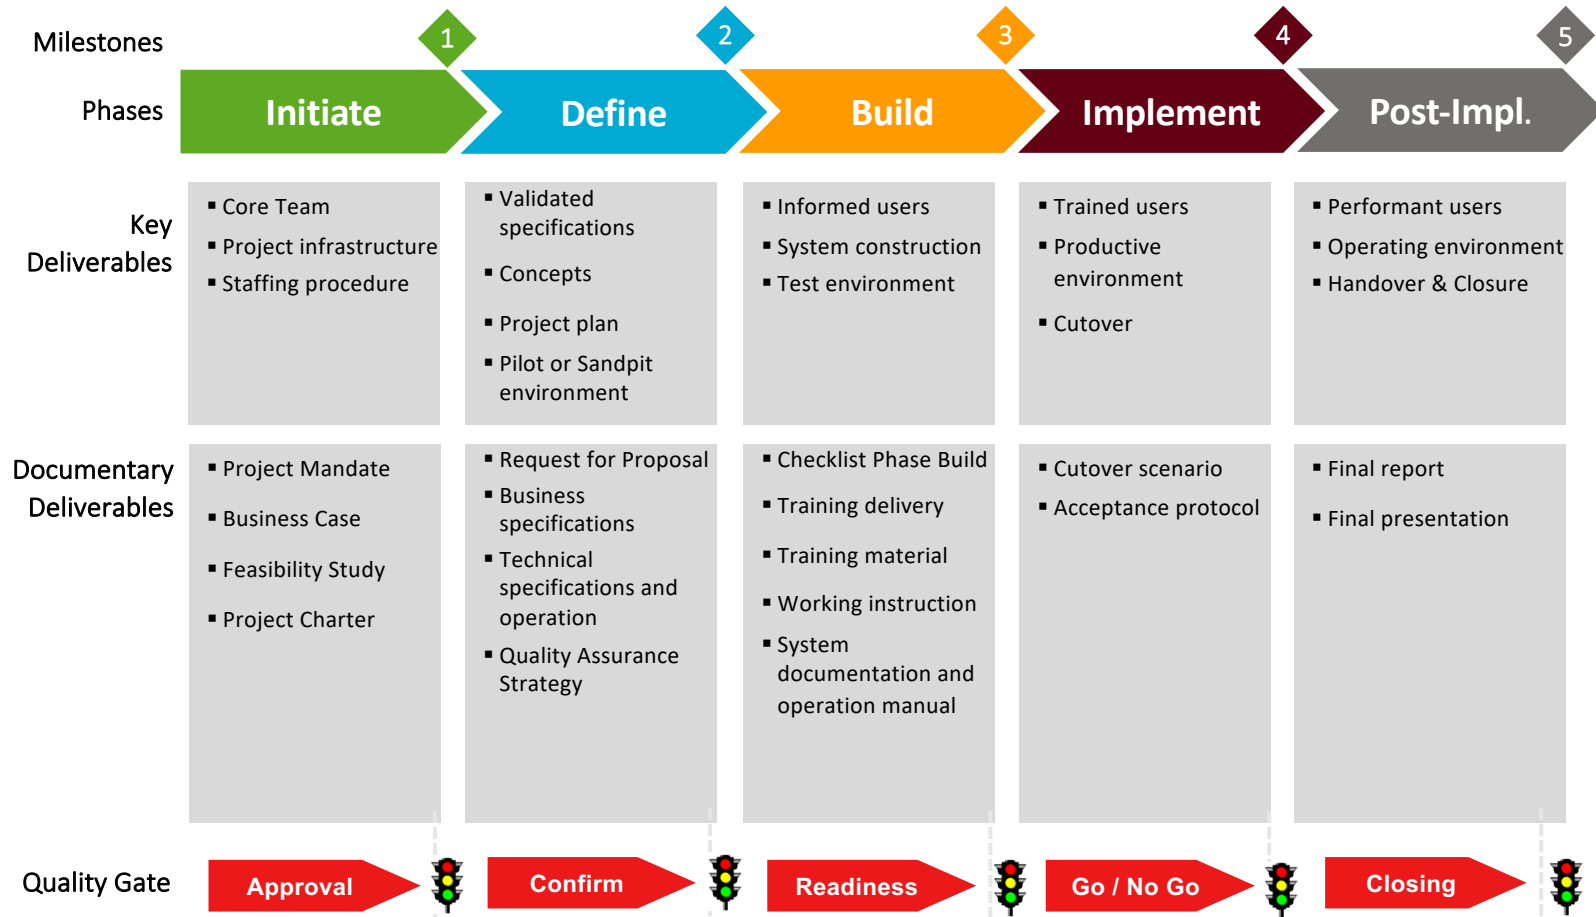

IP = Initiating a Project

SB = Managing a Stage Boundary

CP = Closing a Project

Based on OGC PRINCE2® material. Reproduced under licence from OGC.

Proposed Project Phases

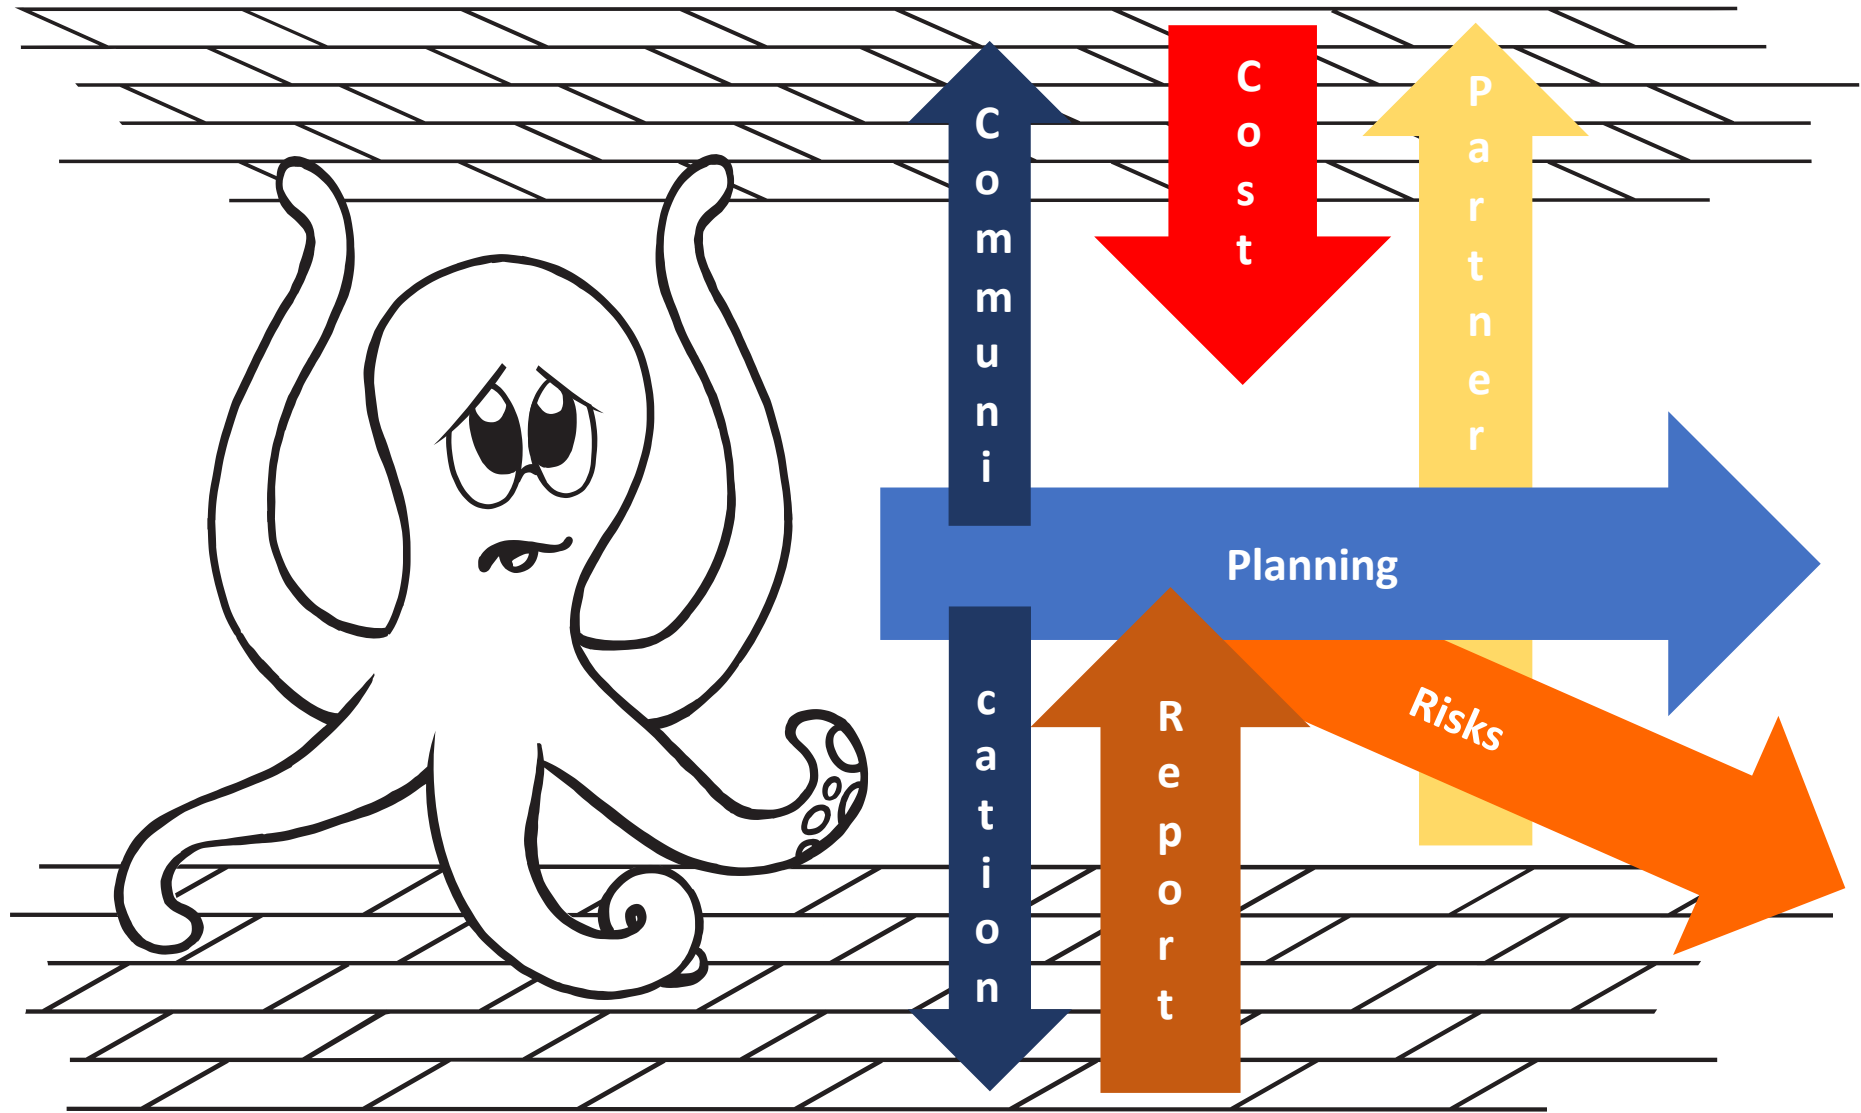

Adjust the phases to the project complexity

	Quantitative	Qualitative	Tools
Small	<ul style="list-style-type: none">- less than 50 mandays- less than 1 month- less than 50 TCHF	<ul style="list-style-type: none">- in one business area only- little complex- no many participants	<ul style="list-style-type: none">- Project controlling- Low coordination
Medium	<ul style="list-style-type: none">- more than 50 mandays- less than 6 months- between 50 and 250 TCHF	<ul style="list-style-type: none">- cross-functional- complex- strategic	<ul style="list-style-type: none">- Project Method- Risk Management
Big	<ul style="list-style-type: none">- more than 50 mandays- more than 6 months- more than 250 TCHF	<ul style="list-style-type: none">- very cross-functional- highly complex- very strategic	<ul style="list-style-type: none">- Project Method- Risk Management- Program Management

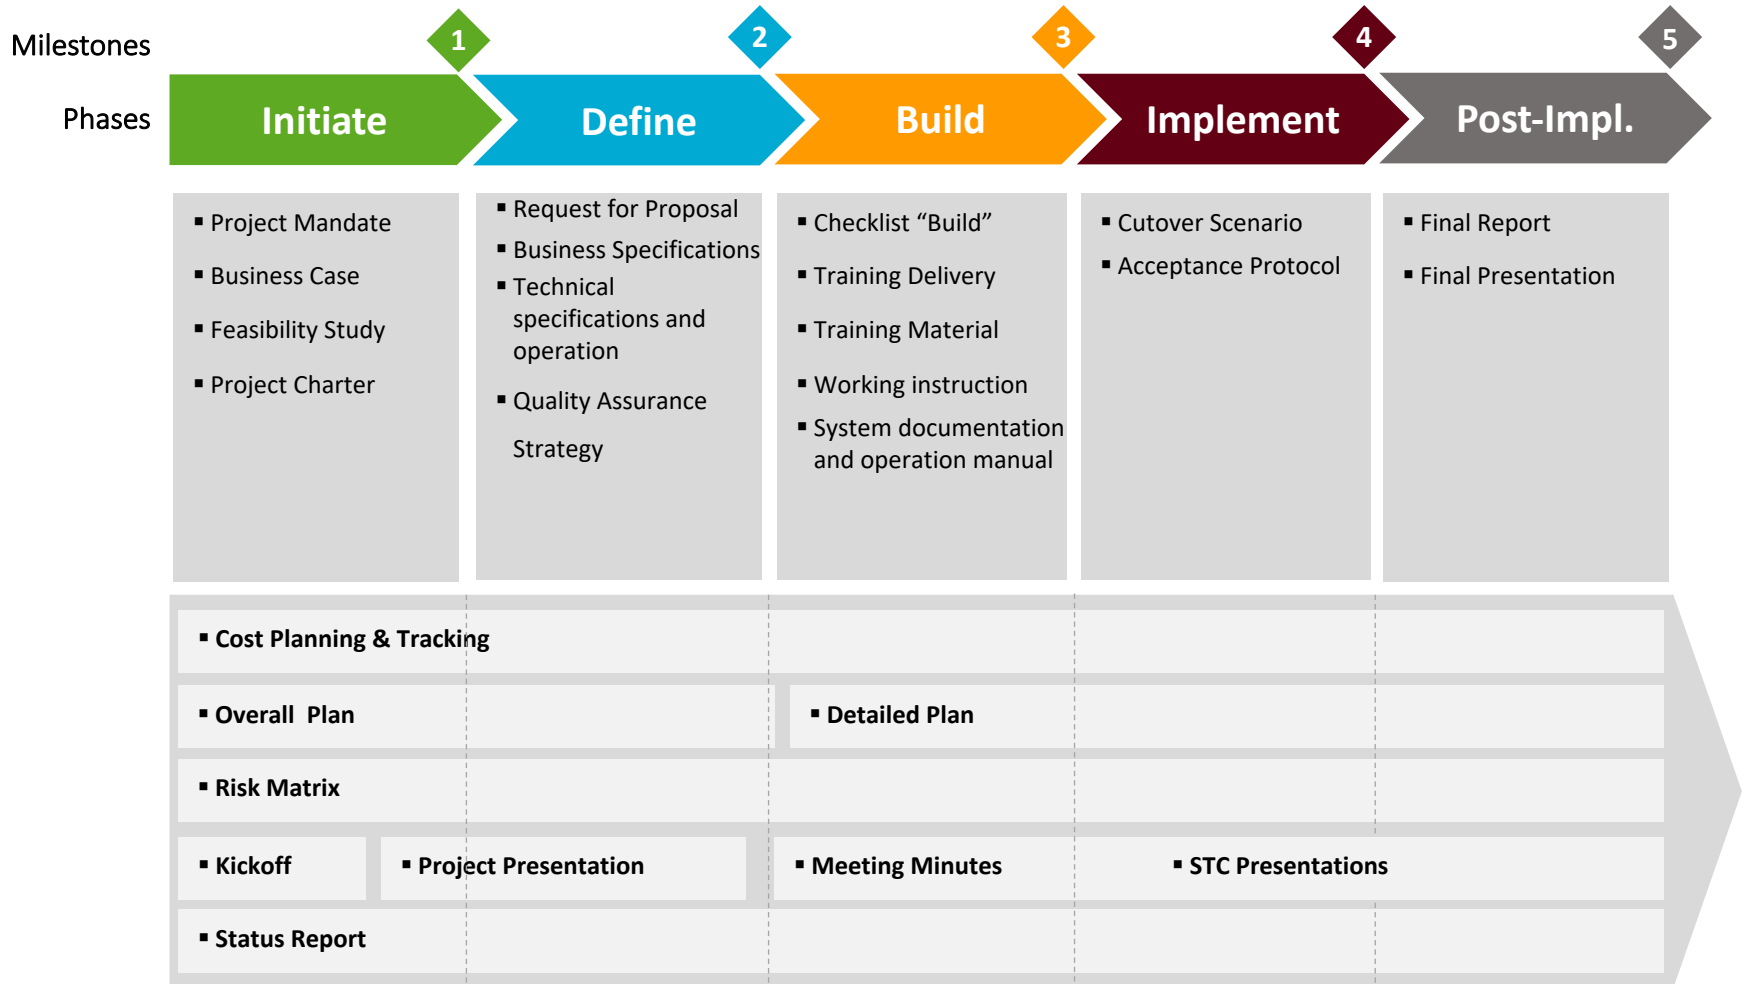

What is a Support Process?

Deliverables for Support Processes

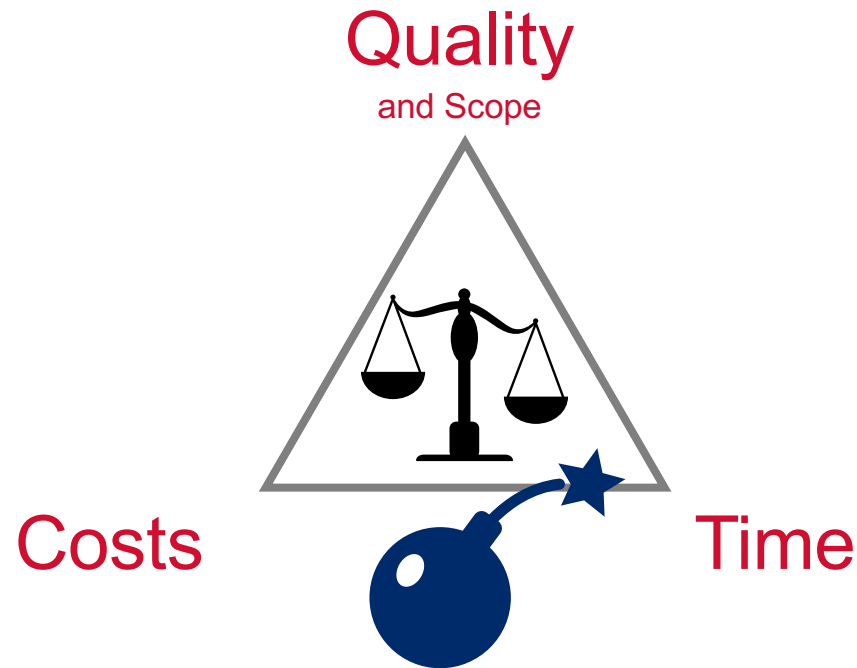

A Project grows always with the team together

Projects and all tasks are always driven by ...

... and it is the ultimate challenge to keep that in balance !

- Project duration
- Budget estimation
- Project Organigram
- Risk Matrix

Helpdesk Outsourcing

The company has different locations over 4 continents and wants to harmonize the helpdesk processes.

The IT Management asks you to investigate possibilities to reduce IT costs, especially by analyzing an outsourcing model in India. This should apply to IT Helpdesk and 1st Level Support.

Data Entry outsourcing

Outsource your data entry work, or hire entry agents.

Global CRM

The company wants to have a global CRM system in place to manage local and international customers with the same platform.

The idea is to have a cloud solution in place so that customer data sets are available all over the world as some customers become global players.

	Multiple Vendors providing on premise CRM Solutions at various business locations
	Data management processes are not clearly defined, data duplication and redundancy is a problem
	Maintaining multiple CRM systems is costly & inefficient; internal support needed
	Integration with marketing is not possible; no clear customer profiles & journeys are created

Existing CRM solutions are outdated and not able to support the needs of the growing global business.

eBilling

Saving time, paper and money...

- Send invoices electronically to our customers
- Direct delivery of e-bills from our software solutions
- No printing and shipping costs
- Better data quality: no need for subsequent credit data enquiries
- Higher delivery rate as there is no change of address and quicker payment receipt
- Unchanged credit processes

Go Green
Sign up for E-Billing

Cloud-based HR Management

Outsourcing of Payroll and Personnel Administration

- More time for core business?
- Cost effectiveness
- Need for clearly defined processes especially for the routine tasks
- No in-house skills in HR Management?
- Need for smart Engagement and Recruitment through leveraging social data

New data center

Many HW are end of life and the current data center is not compliant anymore as it does not fulfill the new security requirements. The idea is to move from the in-house infrastructure to a modern cloud infrastructure.

Data Management

Within the digitalization, it has been noticed that the quality of data is not sufficient. The project should aim at identifying the major gaps, finding sustainable procedures and addressing the new GDPR requirements concerning data privacy.

Archimedes once said:
"Give me a place to stand,
and I shall move the world."

Resources
Skills
Technologies

ITPM

- 1) Have project roles in place for the whole organisation
- 2) Use a top-down approach
- 3) Systematic use of lessons learned (learning organisations)
- 4) Automate where possible (for instance in the testing area or for the deployment of releases)
- 5) Re-use (put templates in place)
- 6) Collect experience values

142.000 M€

lost every year in UE due to
IT
failed projects

66%

IT projects are over budget

1 in 6

IT projects have 200%
extra cost and a 70%
delay

**«Up to 70% of software

in IT projects success

17%

IT projects go so wrong they get
their own organizations existence
at risk

33%

IT projects are over time

And you all know what may happen...

How the customer explained it

How the project leader understood it

How the analyst designed it

How the programmer wrote it

What the beta testers received

How the business consultant described it

How the project was documented

What operations installed

How the customer was billed

How it was supported

What marketing advertised

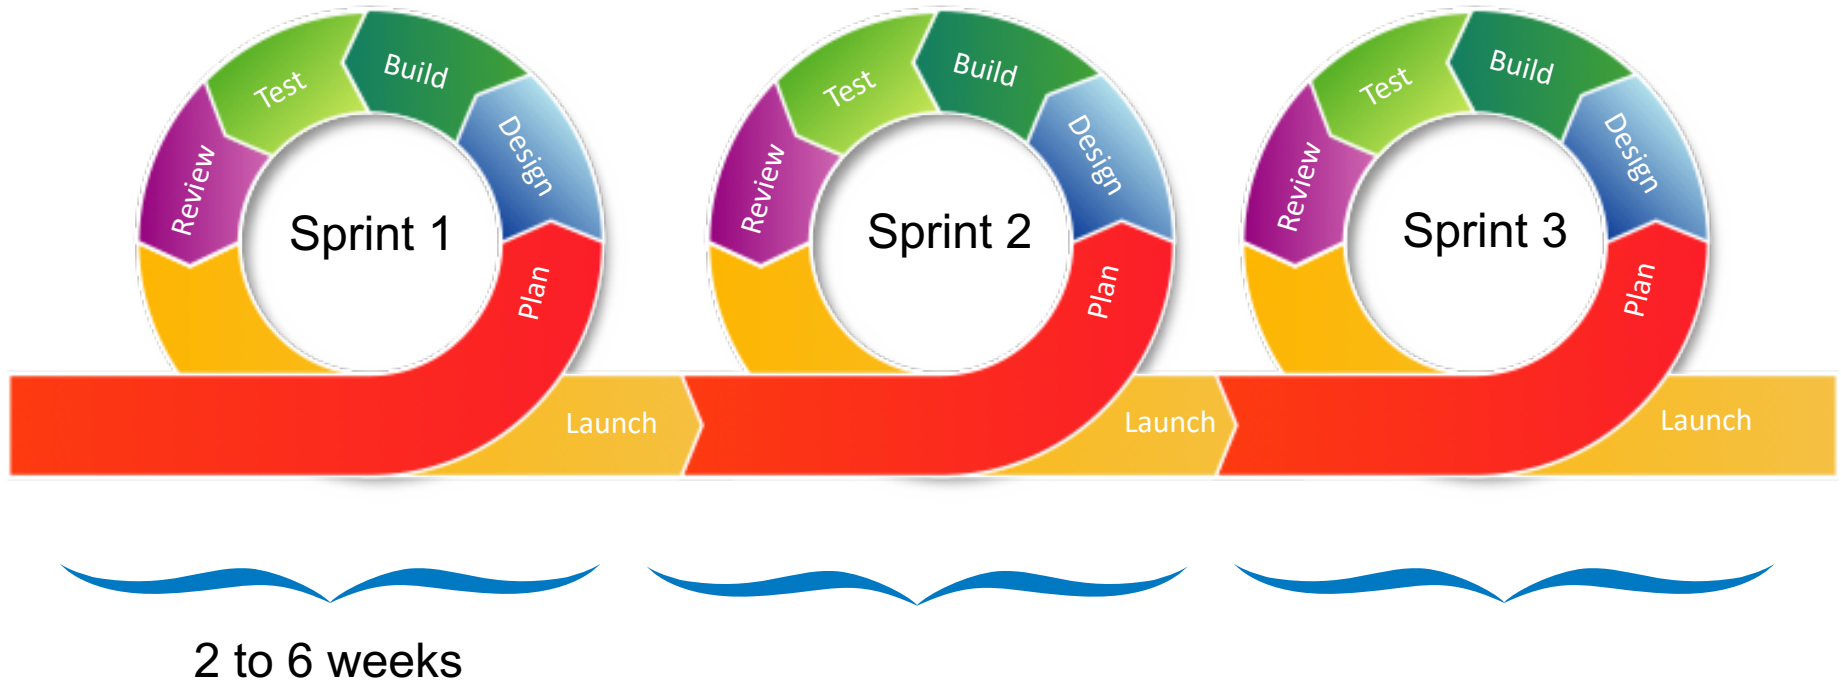

What the customer really needed

Picture of the Agile Manifesto meeting on 2001

SCRUM is the most popular SW agile method

- Quick delivery -> one sees if the direction is still right
- The whole team is involved -> no hidden costs
- Requirements are always reviewed -> you get what you see
- Backlog is regularly prioritized -> possibility to adapt to new customer needs

Product Owner: Responsible for the Product

Scrum Master: Responsible for the Process

Scrum Developer : Employees

Kanban

Set up

- team of 4 to 5 members
- minimum three roles. i.e. cutter, painter, and a tester/QA.
- pack of crayons, scissors and printed Easter Egg Sheets

Rules overview

The goal is to provide as many colored paper eggs as possible.

- 1) Each egg must have at least two different colors
- 2) Two separate people must complete each coloring activity
- 3) Each egg should be minimum 90% filled with color
- 4) White space doesn't count as color
- 5) Cutting must be around oval edges of the egg
- 6) Eggs with major distractions in cutting will be disqualified

Classic

Cutter Painter Quality

Plan

Execution

3 Min.

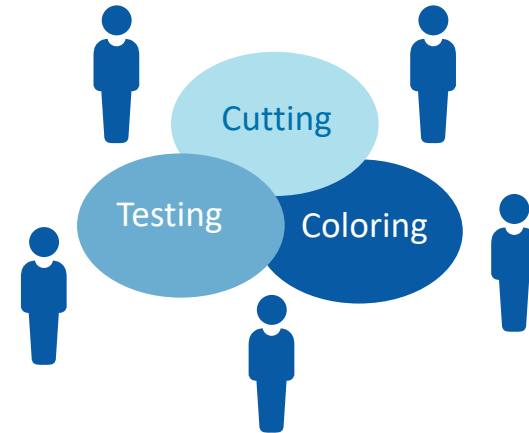

6 Min.

3 Min.

- **Delivery:** 3-minute planning, 6 minutes execution and 3 minutes learning (which optionally can be merged with QA)
- **Organization:** team members are assigned specific roles; cutters (who cut the eggs out), painters (who paint the eggs) and QA (who are the only ones that can assess and correct the eggs). Each team member can only perform a role he was assigned to.

Work organized around the team

Agile

Plan Execution Retro

1 Min. 2 Min. 1 Min.

Plan Execution Retro

1 Min. 2 Min. 1 Min.

Plan Execution Retro

1 Min. 2 Min. 1 Min.

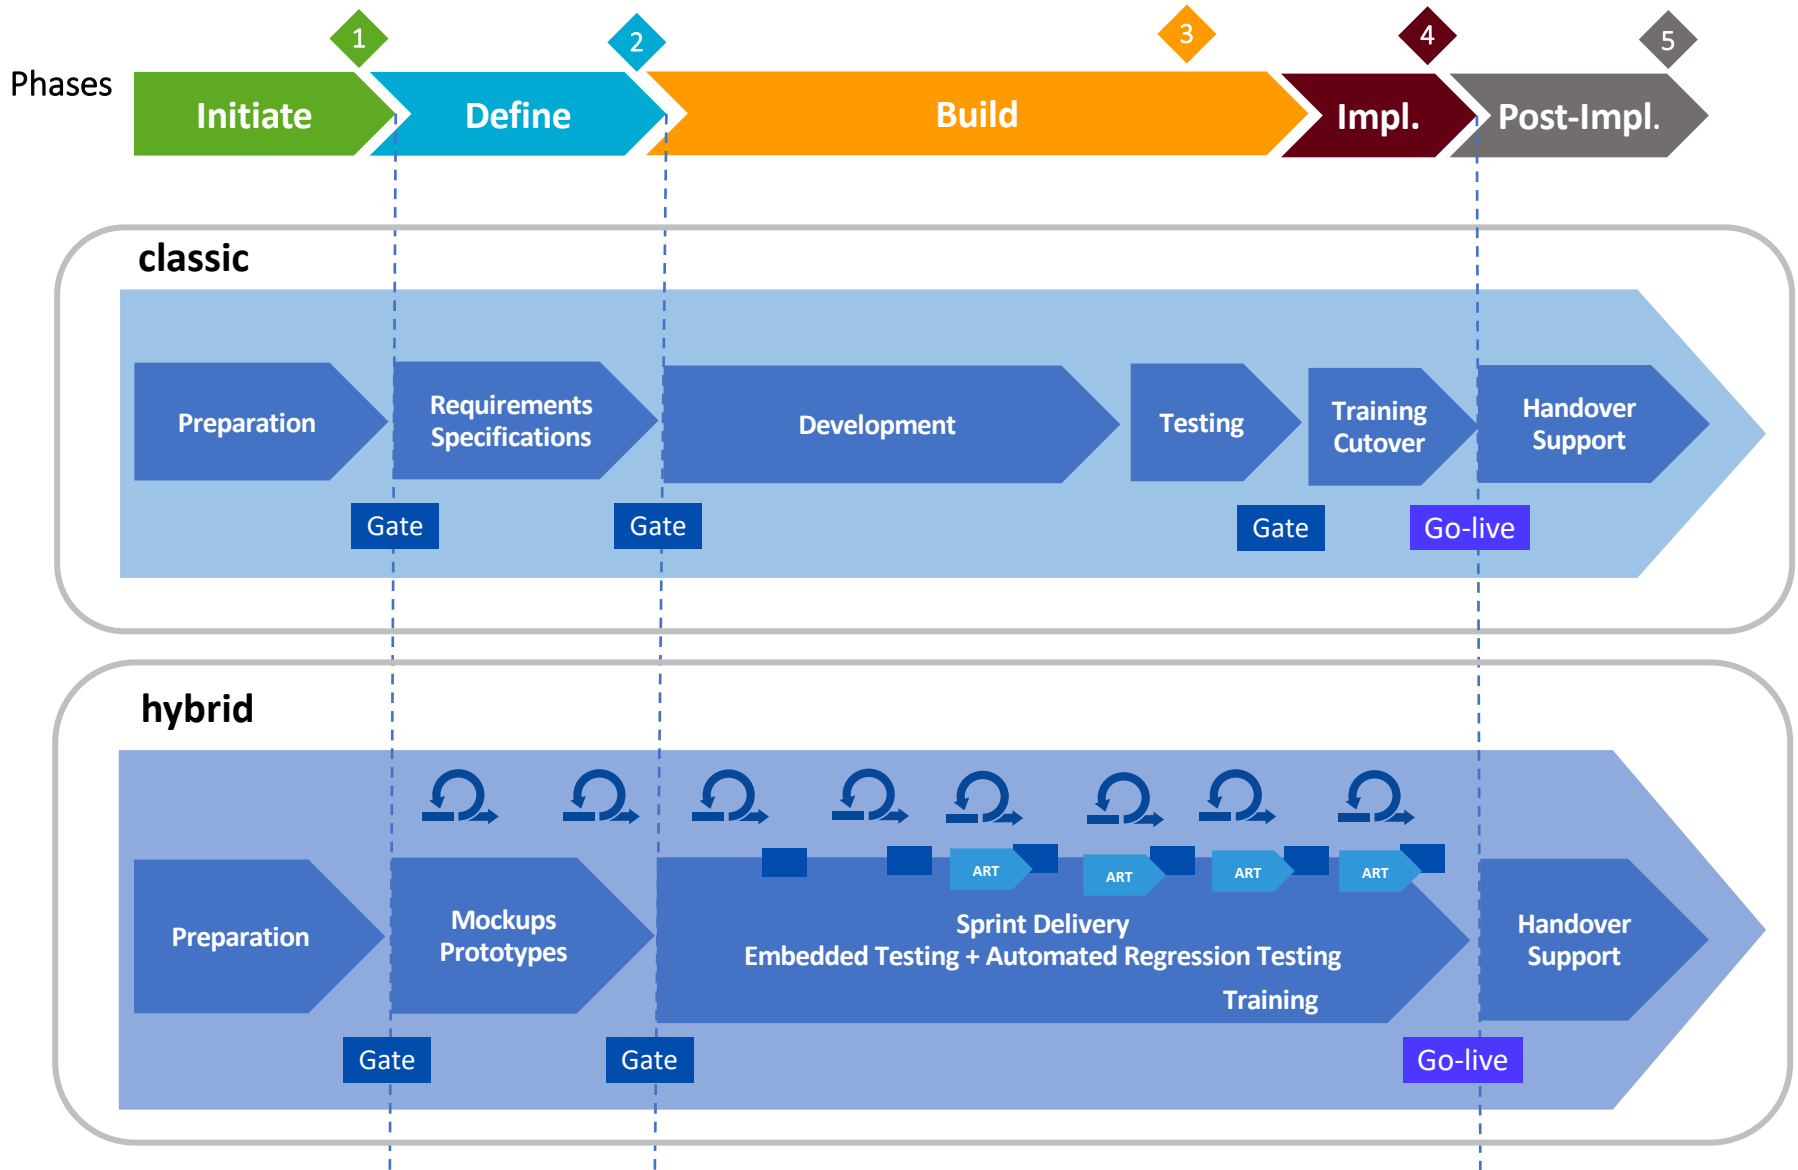

- **Delivery:** 1-minute planning, 2-minute execution and 1-minute retrospective (learnings)
- **Organization:** the roles within the team are made obsolete — everyone within the team can perform any activity

Team organized around the work

PM Definitions and Templates

Phase = Bundle of project activities,
with a start and an end

Milestone = each project phase ends with a milestone which indicates that a significant stage of the project has been reached (as the word “mile stone” means)

Quality Gate = determines whether the project has achieved the exit criteria, which means if the milestone has been reached or not, and if the results are satisfactory or not.

Key Deliverables

- ☺ **Trained Team**
- 💻 **Project Environment**

Documentary Deliverables

- 📁 Credit Application
- 📁 **IT Project Form**
- 📁 **Project Charter**
- 📁 **Project Plan** (preliminary)
- 📁 **Shaping the document landscape**
- 📁 Request for Proposal and Vendor Selection
- 📁 System Technical Environment Planning (STEP)
- 📁 Validation Check
- 📁 Validation Plan
- 📁 Document Registry
- 📁 Risk Items List and Risk - Mitigation

Quality Gate

Approval

- ✓ Objectives clearly identified and achievable?
- ✓ Project activities developed in the right direction?
- ✓ Willingness to generate the needed effort?
- ✓ Realistic planning?
- ✓ Risks identified?

Key Deliverables  **Accepted Business Processes**
 *Sandpit and/or Development Environment*

Documentary Deliverables  **System Requirements Analysis (SRA):**
 - **Functional Design Report**
 - **GAP Analysis**
 **System Delivery Specifications (SDS)**
 - **Process List & Flows**
 - **Data Model/Load**
 - **Programs**
 - **Interfaces**
 - **Authorisations**

 **Product Evaluation and Recommendation (PER)**
 **Milestone 1 Review Protocol**

Quality Gate

- ✓ Defined solution as a good answer to achieve the goals of the project?
- ✓ All changes needed identified and properly assessed?
- ✓ Specifications available?

- ✓ Project strategy delivery adequate to achieve project goals?
- ✓ Reviewed Business Case still approved?
- ✓ Enough resources?

Key Deliverables	<ul style="list-style-type: none">  Accepted System  Development and Consolidation Environment
Documentary Deliverables	<ul style="list-style-type: none">  <u>Technical System Design (TSD):</u> <ul style="list-style-type: none"> - Development List - Business Conditions - Data Model/Load - Programs - Interfaces - Authorisations - Customisation  Product Acquisition and Installation (PAI)  <u>Test and Fault Report (TST):</u> <ul style="list-style-type: none"> - Test Strategy & Scenarios - Functional Unit Test - Integration - Regression - User Acceptance  <u>Security Plan and Test Protocol</u>  <u>User Procedure Development (UPD):</u> Strategy, Plan and Manuals
Quality Gate  Readiness	<ul style="list-style-type: none"> ✓ Project on track? ✓ System functionalities available according to the defined requirements? ✓ Cost baseline? ✓ Milestones and deliverables on track? ✓ Reduced risks thanks to mitigation measures?

Key Deliverables

- ☺ **Trained Users**
- 💻 **Production Environment**

Documentary Deliverables

- 📁 **Stress Test Protocol**
- 📁 **User Training Protocol**
- 📁 **Technical Operations Protocol**
- 📁 **Cutover Plan and Contingency Planning**
- 📁 **Validation report**
- 📁 **Problem and Change Management Procedure**
- 📁 **Audit Report**

Quality Gate

- ✓ Readiness of productive system ?
- ✓ Rework needed ?
- ✓ Productive rollout plan available and plausible ?
- ✓ Project organisation ready to take sound and quick decisions?
- ✓ Risks and planned measures discussed with all persons concerned?
- ✓ Persons feel “in charge”?

Key Deliverables

- ☺ Performant Users
- 💻 **Operative Environment**

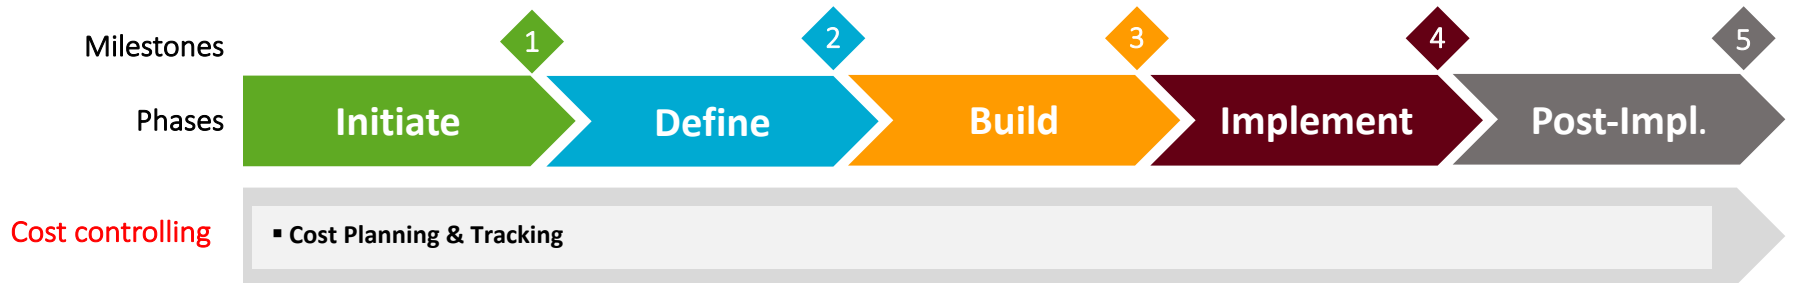

Documentary Deliverables

- 📁 Post Implementation Review / Business Assessment Protocol / Lessons learned
- 📁 Future Enhancements Protocol
- 📁 Handover Checklist including Risk Assessment Protocol
- 📁 Core Compliance Audit

Quality Gate

- ✓ Goals met?
- ✓ Budget target achieved?
- ✓ Good planning baseline?
- ✓ Project organisation well trained and suitable?
- ✓ Delivery strategy effective and appropriate?
- ✓ Concerned persons sufficiently involved?
- ✓ Transparent steering done?
